The Energy Evolution: Learning from the Past Century, Powering the Future

**DOWNTOWN TULSA, OK, OCTOBER 3-5, 2021**

The American Association of Petroleum Geologists, Mid-Continent Section Convention (AAPG MCS) will be held in Tulsa, Oklahoma on October 3-5, 2021. The event is hosted by the Tulsa Geological Society and will be held in conjunction with a celebration of the 100th anniversary of the Society's founding. Held in Tulsa once every six years, this event provides an amazing opportunity to show case all that our City has accomplished and provide visitors a view of the greatness towards which our City is moving.

With 100 years of active technical program and countless hours of community engagement and volunteering, there is so much to celebrate. Our member geologists have been at the forefront of the discoveries which shaped Tulsa into the Oil Capital of the World and maintained the city's vibrant energy sector. Tulsa is known for innovative technologies born from the demands of the Mid-Continent oil fields. Our membership has authored thousands of technical papers and presented across the globe on subjects critical to the benefit of mankind. The philanthropy Tulsa is so well known for is rooted in the Earth and the scientists who lead to the subsurface discoveries.

As a new decade dawns, it is clear changes are ahead for energy supply and demand. Our concerns as global citizens are shifting. Our global community requires a robust, efficient, reliable, and sustainable energy supply. The geologist's creativity; skills of investigation, observation, and description; and technical thinking towards solutions, will continue to be at the forefront of the discoveries and technical advances required to fulfil the energy demands of a growing human population while addressing our collective goals and concerns of impact. It is our responsibility to provide the intellectual resources for our current and future members to meet those goals and address those concerns.

This letter is directed to a select group of organizations, including yours, which play a key role in our industry, the City of Tulsa, and for the future success of all. We know that you recognize the critical impact the geological community has made locally, and that our role will become ever more important in the future. Your organizations financial commitment is critical to the success of this event. We hope you will join us as a sponsor in October for what is most certain to be a fantastic meeting of technical programming and social engagement.

Sincerely,

Shane Matson, Joel Donohue and Chris Carson
